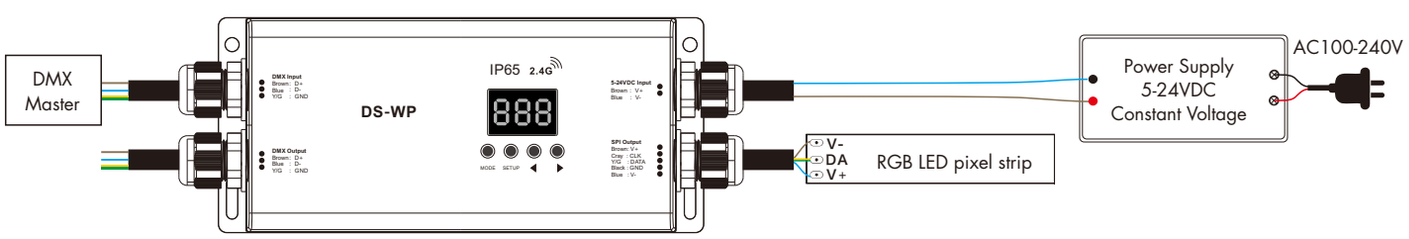
Wiring Diagram



Note:

- If the SPI LED pixel strip is single-wire control, the DATA and CLK output is same, we can connect up to 2 LED strips.
- If the SPI LED pixel strip is two-wire control, we can connect up to 1 LED strips.
- When the controller and the strip share a common power supply, if the strip load current exceeds 10A, the power input line of the strip is directly connected to the power output, and only the DATA/CLK/GND line is connected between the controller and the strip.

Operation

IC type, RGB order and pixel length length setting

- At first you must first assure IC type, RGB order and pixel length of the LED strip is correct.
- Long press M and ◄ key 2s, prepare for setup IC type, RGB order, pixel length, automatic blank screen,
  Short press M key to switch four item.
  Press ◄ or ► key to setup value of each item.
  Short press SETUP key, or timeout 10s, quit setting.

DMX decode mode

There are three DMX decode modes selectable.
DMX decode mode1: the DMX data change light directly;
DMX decode mode 2: switch dynamic modes, brightness grade and speed grade via 3 DMX data.
DMX decode mode 3: the DMX data change light directly (One data copy triple, control one pixel, for SPI type white light strip).

DMX decode mode

Long press M and SETUP key at the same time, prepare for setup DMX decode mode.
Press ◄ or ► key to switch between DMX decode mode 1 (display"d-1"), DMX decode mode 2 (display"d-2") and DMX decode mode 3 (display"d-3").
Short press SETUP key, and then return to DMX address interface.

DMX decode mode 1:

- Short press M key, when display 001-512, enter DMX decode mode.
- Press ◄ or ► key to change DMX decode start address(001-512), long press for fast adjustment.
- Short press SETUP key, prepare for setup decode number and multiple of pixels.
  Short press M key to switch two item.
  Press ◄ or ► key to setup value of each item.
  Decode number(display "dno") : DMX decode channel number, range is 003-600(for RGB).
  Multiple of pixels(display "Pno") : Each 3 DMX channel control length(for RGB), range is 001- pixel length.
- If there is a DMX signal input, will enter DMX decode mode automatically.

For example, the DMX-SPI decoder connect with RGB strip:
